

RONAK PATEL

AI Automation & Agentic Systems Developer

Surat, Gujarat, India | +91 8141876971 | khuntronak5@gmail.com
github.com/ronakkhunt28-create | Portfolio & evidence-backed case studies

PROFESSIONAL SUMMARY

AI Automation & Agentic Systems Developer building Python/FastAPI services, n8n workflows, retrieval pipelines, and approval-gated automation. Uses AI coding tools for implementation while owning architecture, deterministic business rules, provider fallback, testing, and validation scope. Independent project evidence is distinguished from customer production deployment.

TECHNICAL SKILLS

AI & Agentic Systems: LLM adapters, orchestration, RAG, provider routing, prompt-injection screening, human review gates

Backend & Integration: Python, FastAPI, Pydantic v2, SQLAlchemy/SQLModel, n8n, REST APIs, webhooks

Data & Verification: SQLite FTS5, PostgreSQL/pgvector, application audit logs, SHA-256 tamper evidence, Pytest, Playwright, HTTPX, Git

SELECTED AI PROJECTS - HISTORICAL VALIDATION EVIDENCE

SupportPilot AI [GitHub repository](#)

Python | FastAPI | SQLite FTS5 | n8n | Gemini / Groq / OpenRouter

- Built ticket intake, P1-P4 SLA prioritization, citation-linked response drafting, provider fallback, and human review for sensitive or low-confidence tickets.
- Build report records 79/79 tests, 85.92% coverage, 26/26 browser checks, and n8n webhook validation. These are historical project checks, not a customer deployment claim.

AI Lead Management Agent [GitHub repository](#)

Python | FastAPI | SQLite | n8n | Multi-provider LLM routing

- Separated semantic signal extraction from a deterministic seven-factor qualification engine. Structured budget gates limit model authority but do not independently verify a prospect's funds.
- Current repository README records 68/68 tests and 81% coverage. Application audit logs expose scoring, provider attempts, and honest notification states; no sales-conversion uplift is claimed.

OpsForge AI [GitHub repository](#)

Python | FastAPI | Next.js | PostgreSQL/pgvector | Redis/Arq | Playwright

- Implemented five agent roles, dependency-ordered workflows, allowlisted tools, approval/edit gates, idempotent dispatch, and a SHA-256 chained audit log.
- Recorded validation: 32/32 tests and 18 acceptance criteria. The end-to-end lifecycle used SimulatedAdapter; a Gemini network handshake did not establish live inference. Live LLM validation remains pending.

ADDITIONAL ENGINEERING WORK

Trading Journal Pro X: Python/FastAPI and React desktop suite, Windows WebView2 shell, SQLite WAL, MT5 reconciliation and analytics. Live trade-close ingestion and cloud AI validation are pending; not production-ready.

BizHunter Inventory MIS: Python/PySide6 inventory, stock movement, MIS reporting and backups. Release candidate; customer production deployment is not verified.

WORK & OPERATIONS EXPERIENCE

Excel Automation & Operations Executive - Maheshwari Silk Mills

Part-time | April 2026 - June 2026 | Surat, Gujarat

- Worked on Excel/VBA inventory workflows, TOTAL STOCK summaries, recurring stock reporting, and structured product/transaction records. Business impact has not been independently measured.

EDUCATION

Bachelor of Commerce (B.Com) - Undergraduate Student

J. Z. Shah Arts & H. P. Desai Commerce College, Surat

Focus: Business operations and self-directed software development, automation, APIs, databases and testing.
